

# H-Spectrum

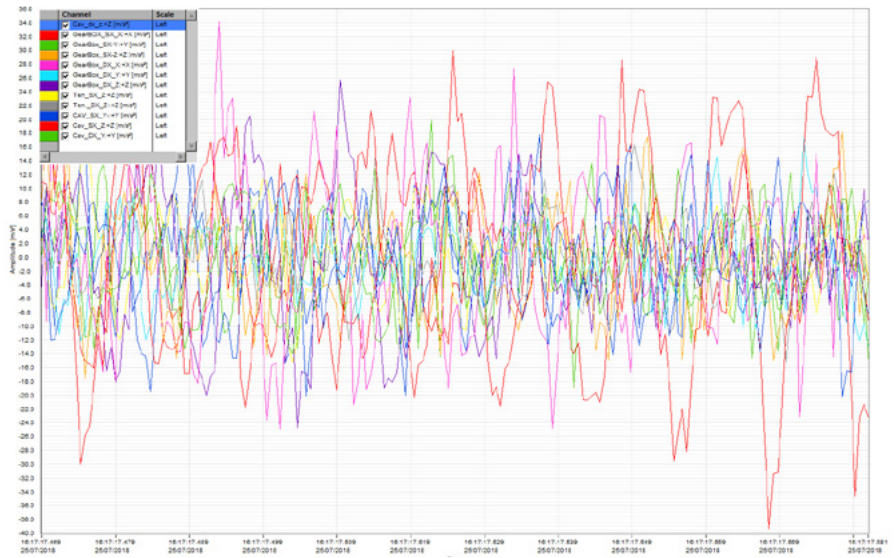

## Vibration Analysis System

H-SPECTRUM is our innovative multi channel spectrum analyzer developed over the years and to be compliance with the International Standard:

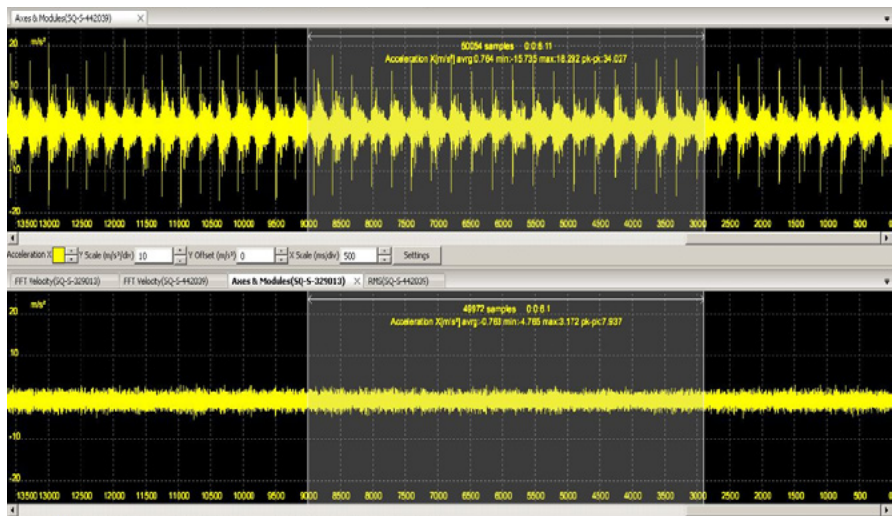

- ISO 2631
- ISO Standard 10816

This acquisition system, based on our proprietary synchronization technology, is the only system on the market that allows the synchronous acquisition of high frequency data from accelerometers, and at the same time is able to acquire all the operating parameters of the yacht systems and of the ship.

## Accelerometers synchronous channel

## Waveform analysis

## FFT Analysis of 2 accelerometers synchronous channel
